

# Getting Started

## Assignment

### **Ans to the Q No. 1**

Traditionally, Hello World programs are used to illustrate how the process of coding works, as well as to ensure that a language or system is operating correctly. They are usually the first programs that new coders learn, because even those with little or no experience can execute Hello World both easily and correctly.

### **Ans to the Q No. 2**

The comment tag is used to insert comments in the source code. Comments are not displayed in the browsers. You can use comments to explain your code, which can help you when you edit the source code at a later date.

### **Ans to the Q No. 3**

Elements are the individual components of an HTML document, such as headings, paragraphs, and images. Each element is represented by a corresponding HTML tag.

tags are used to define the structure and layout of a webpage. They are the basic building blocks that are used to create elements on a page.

Attributes are used to provide additional information about an element. They are added to the opening tag of an element and they always come in the form of name-value pairs.

### **Ans to the Q No. 4**

An HTML entity is a piece of text ("string") that begins with an ampersand ( & )

and ends with a semicolon ( ; ). Entities are frequently used to display reserved characters (which would otherwise be interpreted as HTML code), and invisible characters (like non-breaking spaces)
